HUMANISTICS

FOR DEVELOPERS

# Compute. Data. Models. *Coherence.*

**Coherence Intelligence for developers**

A brief from Humanistics
For SaaS and corporate developers

SOURCE

# Compute. Data. Models. *Coherence.*

TODAY'S AI

**Today's AI can generate, answer, and automate. It cannot perceive the coherence of a living organization, the fit between what that organization commits to, says, cares about, and offers.**

*That's the one thing AI can't give you today.*

SOURCE

Humanistics' Source gives it. It reads coherence across every dimension at once, then does three things with what it sees:

1. *pinpoints* where drift is happening,
2. *traces* the implications before they reach you,
3. and *offers* recommendations you can act on.

IN USE TODAY

This isn't a prototype. It's a system we've refined over thirty years of organizational work: capabilities that only became possible once AI could hold the full context of a living organization. It's in use today.

TO BUILD ON

Now we're readying it for developers to build on:

through our **APIs**,

or with an **end-to-end system** that develops, corrects, and supports your application as it goes.
